NEXITE®. concrete.

a new generation

ACO DRAIN® Multiline NX

Increased material range for more applications

ACO DRAIN®

The benchmark for drainage for over 50 years

ACO DRAIN® Multiline

made of ACO polymer concrete, with V-cross-section, proven millions of times worldwide to date

ACO design cover in Voronoi design

Inspired by nature, ACO design covers in cast iron set design accents

Intelligently designed and processed

The Hypersteel edge protection of the ACO DRAIN $^{\circ}$ Multiline saves 50 % CO $_{2}$ -eq

ACO DRAIN® XtraDrain made of composite

Extremely lightweight and yet highly stable up to class C 250

The ACO Composite Grating B 125/C 250

Made entirely of recyclable plastic: sustainable, non-slip, R 11, thanks to Microgrip and easy to handle thanks to the Drainlock screwless locking system

The ACO DRAIN® family, a material solution for any project

- ···► polymer concrete
- ··· composite

and now:

···▶ NEXITE®. a new generation in channel drainage

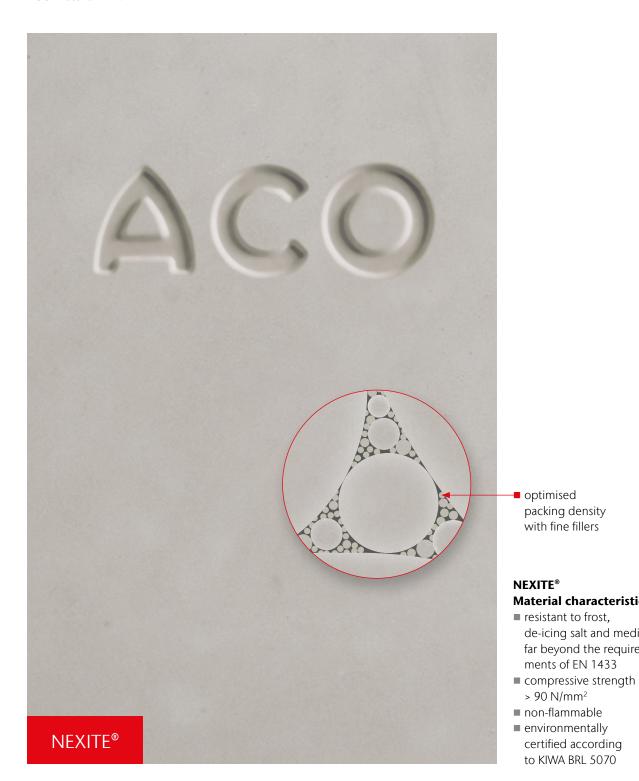

NEXITE

ACO DRAIN® Multiline NX

Made of NEXITE®, the new material in the ACO DRAIN® family

ACO Seal in Technology

Protection for the environment and the building: The unique combination of the polymer concrete material and the standard seal ensures a continuously water tight linear drainage

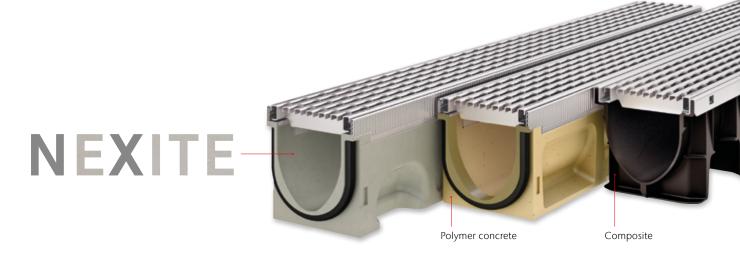

The newly developed ACO material NEXITE® (abbreviated NX) is composed with very fine fillers, which enable a high packing density. This results in particularly high strength and load-bearing capacity.

The binders are used in accordance with the European Directive REACH on the protection of human health and the environment. This means that NEXITE® products support sustainable construction in the fields of public urban places, roads, infrastructure as well as heavy load applications.

NEXITE® is 100 % recyclable and can be reused in the natural material cycle.

NEXITE

edge rail available in galvanized steel, cast iron and new: composite

available with all ACO Drainlock gratings and material uniformity for edge protection and gratings

light as usual, less than 20 kg for Multiline NX in nominal width 100

lightweight

watertight channel run due to NEXITE® and ACO Sealin technology according to IKT certificate D01398

watertight

Sealin

NEXITE®, environmentally certified by KIWA according to BRL 5070

robust

frost, de-icing salt and chemical resistant far beyond the requirements of EN 1433

"With the use of NEXITE® in the ACO DRAIN® family, we are adding an essential constituent to our multi-material competence. The triad of channel ranges incorporates polymer concrete, plastic and NEXITE®. They all feature a common use of the large variety of ACO Drainlock gratings. With this, we meet the extensive requirements of the market in terms of flexibility and cost-effectiveness."

Tim Uhing International product management

Commitment to quality

IKT – Institute for Underground Infrastructure in Germany

KIWA – Third Party Control in Germany

Steel edge rail and grating

The innovative Hypersteel design of the galvanised steel edge protection causes approx. 50 % less CO₂-eq compared to the ACO standard edge protection due to the reduced material input in the manufacturing process. In combination with Drainlock gratings in slot, mesh or slot top design this makes for a very popular choice.

- compatible with boltless locking system Drainlock
- available in steel and stainless steel
- large selection of grating designs and slotted frames

Cast iron edge rail and grating

The strong cast iron edge rail is made for heavy duty applications and in parallel provides a clear aesthetic profile especially for applications in public urban spaces. Combined cast iron Drainlock gratings in slot or mesh design – this material combination is favoured these days.

- compatible with boltless locking system Drainlock
- high load-bearing capacity up to class E 600
- cast iron gratings also available in ACO Freestyle design

A consistent design language

"Design freedom and sustainability are deeply rooted in modern architecture and planning. With three materials, each for channel body and edge protection as well as compatibility with the Drainlock grating range, we offer architects and planners the desired flexibility for different areas of application. The new plastic edge protection enables a consistent design language in a new dimension. The combination of composite edge protection and cover with the NEXITE® channel body is the most sustainable variant in the ACO DRAIN® family."

Marie Lauer Technical sales

NEW Composite edge rail

The innovative composite edge rail opens completely new design possibilities, especially in the field of landscaping.

- non-corrosive
- colour stable
- noise-reducing
- compatible with boltless locking system Drainlock
- in combination with composite grating our most sustainable variant

Composite edge rail and grating

The ACO DRAIN® design kit

"The design of the gratings in the ACO DRAIN® family supports the design of open spaces, building and infrastructure. To ensure the planner has the greatest possible design freedom we are constantly developing new products. In order to do this we keep a close eye on the direction in which design trends and new materials are developing. Besides the design of the surface, there are of course also many other complex details to consider. The outcome of our most recent focus is a modular design system with solutions for every application."

Johanna Ladewig Design and development

Highlights of the grating range

double slot grating available in stainless steel

mesh grating Q+ available in steel or stainless steel

longitudinal profil grating available in steel or stainless steel

longitudinal bar grating available in steel or stainless steel

composite grating Eyeleds with LED lighting in white or blue

longitudinal rod cast iron grating with mesh look

creative with Freestyle cast iron gratings and individual designs

composite grating with Micrgrip available in black or silver grey

ACO Multiline grating configurator

The ACO Multiline grating configurator makes it possible for planners and architects to choose Multiline gratings according to visual criteria. All technical information regarding the selected Multiline Drainlock grating can be downloaded and saved in the object folder.

NEXITE

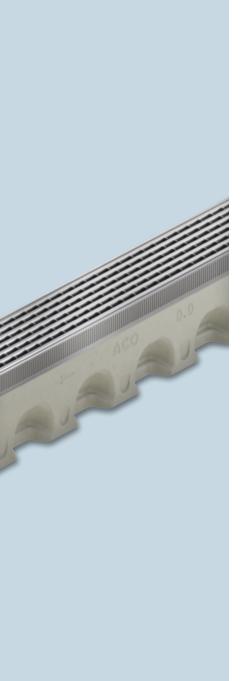

a new generation

ACO DRAIN® Multiline NX

The new ACO DRAIN® Multiline NX meets a wide range of application requirements. Both in urban areas and out of town, the drainage system provides reliable and future-oriented solutions.

Technical

information

A modular system

Outstanding in design and application.

ACO DRAIN® Multiline NX made of NEXITE® is based on a system idea that provides advantages for everyone: for planners, traders, contractors and building owners. Planners save time in the tendering process as the Multiline system concept enables a high degree of standardisation of the interfaces. Dealers benefit from the streamlined product range. Building owners enjoy sophisticated solutions for both design and construction. Multiline combines design diversity and high functionality with extreme durability.

Our ACO sales and consulting team is available to answer any further questions you may have.

ACO DRAIN® Multiline NX

ACO product advantages

- Channel bodies made of newly developed ACO material NEXITE®
 - ☐ Optimised packing density with finest fillers
 - ☐ High material strength and load-bearing capacity
 - □ Recyclable and environmentally certified (according to KIWA certificate BRL 5070)
- Watertight channel run based on Sealin Technology
 - (according to IKT certificate D01398)
 - $\hfill\square$ Integrated EPDM seal
 - ☐ Easy to install
 - □ Protection of groundwater and construction
 - □ Controlled rainwater management
- Improved self-cleaning due to V-cross section and continuously smooth channel invert
- Compatible with all Drainlock gratings

- Channel system according EN 1433
- Nominal width 100 mm
- Edge protection
 - ☐ Galvanised steel and cast iron: Load classes A 15 – E 600
 - □ Composite: Load classes A 15 – C 250

Channel bodies without slope, 1000 mm

- Optionally with or without vertical watertight pipe connection
- Version with vertical watertight pipe connection with lip labyrinth seal made of NBR
- Possible combinations for the channel bodies

 □ Example: Type 0.0 0.0.2 0.1
- *) Channel bodies with lip labyrinth seal pipe connection have a minimally greater bottom thickness than the connectable channel bodies
 - \square Example: Type 5.0.2 corresponds to type 5 5.0 5.1

ACO WaterCycle

The ACO WaterCycle supports you at every stage of drainage planning. This is rainwater management for the environmental conditions of tomorrow.

Where surface water management and water protection begins

ACO surface water drainage

- Drainage channels
- Road and yard drains
- Gully tops
- Manhole covers

Achieving the right water quality

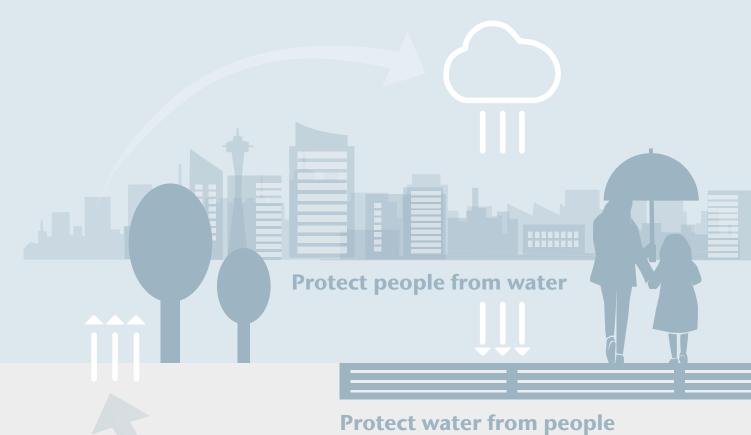

ACO cleaning systems

- Separators
- Sedimentation and filtration systems

Reducing surface runoff to a natural level

Control discharge rate to the required level

ACO retention and storage systems

- Emergency systems
- Infiltration and attenuation systems
- Surface water retention basin

ACO control systems

Flow control systemsPump shafts

Our service offer

Each project is different and has its own specifications and challenges. Aside from our products, we can also offer you our know-how and services, so we can develop tailor-made solutions together – from planning to support after completion. ACO is your first point of contact in all project phases.

train:

Information and Further Education

In the ACO Academy we share the know-how of the worldwide ACO Group with architects, planners, processors and traders, for whom quality is important. You are invited to share these benefits.

design:

Planning and Optimisation

The specification and design in rainwater management allows many variations. We help you to find the right answer.

support:

Construction Consultation and **Support**

To ensure that no unpleasant surprises occur between the planning and implementation of a solution for rainwater management, we advise and assist you for a specific project on your construction site.

care:

Inspection and Maintenance

ACO products are designed and produced for a long life. With our after-sales offers we ensure that ACO fulfils your high quality standards for many years.

ACO. we care for water

ACO is a Water-Tech company that protects water. Building on our global drainage expertise that protects people from water, we increasingly see our mission as also protecting water from people.

With the ACO WaterCycle, ACO provides systems that collect and channel, clean, retain and ultimately reuse water. In this way, ACO contributes to the preservation of clean groundwater as a vital resource, and makes a contribution to tomorrow's world. In its Agenda 2030, the UN global community set the improvement of water quality as one of 17 sustainable development goals.

Intelligent drainage systems from ACO increasingly use smart technology to ensure that rainwater and wastewater are drained, or temporarily stored. With innovative separation and filter technology, we prevent water contamination by pollutants such as fat and grease, fuels, heavy metals and microplastics.

Today, ACO goes one step further: we accept the challenge of reusing water, and thus establishing a resource-saving cycle. For all products and systems, ACO attaches great importance to durability, reusability and a low carbon footprint. The pursuit of sustainability is an ongoing process that we strive to meet every day.

The ACO Group is a global family business that is one of the world market leaders in the Water-Tech segment. Founded in Schleswig-Holstein in 1946, it operates as a transnational network in over 50 countries. Worldwide, ACO is characterised by a high level of decentralised ownership, and explicit regional market proximity.
